

An Internship Report

Of

Web Development

Submitted

To

School of Computer Science and Engineering

IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of

B-Tech (CSE)

By

Roll Number of Student:- 25SCS1003001217

Name of Student: SAHIL RAJPUT

Batch: 2025-2029

CANDIDATE'S DECLARATION

I, **SAHIL RAJPUT**, do hereby declare that the internship report titled "**Web Development**" has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering. All the references have been quoted and I have not taken as such any material from any other source. I affirm that this report is my own and has not been submitted to any other institute for any degree requirement, and further I shall be solely responsible for any kind of copyright violation in this regard.

Signature:-

Student Name: **SAHIL RAJPUT**

Roll No.: **25SCS1003001217**

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the Internship Program. I am thankful for their aspiring guidance, invaluable constructive criticism and friendly advice during this work. I am sincerely grateful to them for sharing their truthful and illuminating views on a number of issues related to this work.

I would like to thank the **Course Joiner** for providing me the opportunity and the structured platform to learn and gain hands-on exposure in the domain of **Web Development**. I am also thankful to my institute, IILM University, Greater Noida ,and the faculty of the School of Computer Science and Engineering for their continuous support and encouragement.

I express my gratitude to my parents for their blessings.

Signature:

Student Name: SAHIL RAJPUT

Roll No.: 25SCS1003001217

TABLE OF CONTENTS

S. No. / Chapter Name	Page No.

5.8 Methodology	9
5.9 Expected Outcomes	10
5.10 Certificates of Completion and Communication Proof	10
6. Bibliography / References	10

4. INTERNSHIP COMPLETION CERTIFICATE

CERTIFICATE FOR INTERNSHIP

TO WHOMSOEVER IT MAY CONCERN

This is to certify that Mr Sahil Rajput student of IILM UNIVERSITY has successfully completed 30 Days (from 10 July 2026 - 10 Aug 2026) Internship program at Course Joiner.

During the internship, Mr Sahil Rajput has closely worked as a part of the Web Development Team. He demonstrated good coding skills and strategy with a self-motivated attitude to learn new things.

We wish him all the best for his future endeavours.

Piyush Sharma

CEO & Founder

COURSE JOINER

Internship Offer Letter

TO,

Sahil Rajput

Subject: Offer Letter for Internship in Web Development

Dear **Sahil Rajput**,

Following our selection process, we are pleased to offer you an internship position at **Course Joiner**. We believe your skills and enthusiasm will be a great addition to our team.

Internship Role	Intern-Web Development
Commencement Date	10 July 2026
Completion Date	10 August 2026
Work Mode	Remote/Project-Based

During this tenure, you will work on practical projects under industry mentorship. Your progress will be reviewed periodically, and your performance will determine the successful completion of the internship.

We look forward to a mutually beneficial learning journey. Please confirm your acceptance by starting your onboarding tasks.

COURSE JOINER

5. PROJECT DESCRIPTION

5.1 Introduction

This report presents a detailed account of the 4-Weeks Internship undertaken under the Course Joiner, in the domain of "Web Development". The internship was carried out from 10 July 2026 to 10 August 2026 as part of the requirement of the Bachelor of Technology (Computer Science and Engineering) programme at IILM University, Greater Noida. The primary aim of this internship was to bridge the gap between theoretical understanding of web technologies and their real-world, production-grade application. Over the course of the programme, the learner was exposed to industry-relevant tools and practices used to design, develop, and deploy modern, full-stack web applications.

The internship followed a structured, week-wise curriculum that combined conceptual learning with hands-on assignments, weekly assessments, project documentation, and a final capstone project. On successful completion of all the requirements, including the final assessment/project evaluation, a Certificate of Completion was awarded by Course Joiner.

5.2 Organization Profile

Course Joiner is a Delhi-based ed-tech platform that helps students access paid online courses for free, including content sourced from platforms like Udemy, Coursera, and Google, alongside offering its own paid internship programs and free online workshops. The organization operates primarily as an education and skilling platform rather than a traditional software company, connecting students with certification-based learning and industry-relevant internship opportunities. It works in the broader EdTech and IT training industry, with a specific focus on web development and software skill-building for students and early-career professionals. Course Joiner issues internship completion certificates to its interns, as evidenced by the certificate awarded for this internship, though it does not appear to hold major third-party industry certifications or accreditations. Its work spans course aggregation, internship placement, and skill-development programs aimed at college students and job seekers.

5.3 Problem Statement

Although a large number of engineering students learn the fundamentals of web technologies during their academic coursework, very few get exposure to the practices required to build complete, production-ready web applications. Writing a functional page or script is only one part of web development; making an application responsive, secure, scalable, and maintainable across the front-end and back-end is an equally important and often overlooked skill. The

problem addressed by this internship was to understand and practically implement the complete web development lifecycle -- from designing user interfaces, building interactive front-ends, developing back-end APIs and databases, to testing and deploying full-stack/front end applications.

5.4 Project Objectives

- To understand the complete web application development lifecycle and industry-standard practices.
- To learn front-end development using HTML5, CSS3, JavaScript , and the React.js framework.
- To build responsive, mobile-first user interfaces using ,Grid, and CSS frameworks such as Tailwind CSS.
- To gain hands-on experience with back-end development using Node.js.
- To design and integrate databases (MySQL) for storing and retrieving application data.
- To implement RESTful APIs, authentication (OAuth), and secure data handling practices.
- To use Git and GitHub for version control and collaborative development.
- To deploy full-stack web applications to cloud/hosting platforms.
- To apply all the above concepts in a real-world, end-to-end capstone project.

5.5 Scope of the Project

The scope of this internship spans the entire web development pipeline -- starting from designing wireframes and user interfaces, building interactive front-end components, developing back-end services and APIs, integrating databases, and finally testing and deploying the application to a live hosting environment. It also covers responsive design for cross-device compatibility and the use of modern development workflows such as version control and CI/CD. The internship was limited to a **Virtual** training environment provided by **Course Joiner** and did not involve deployment on any live client production system unless stated otherwise.

5.6 Technologies and Tools Used

- Front-End Development: HTML5, CSS3, JavaScript, React.js
- Styling & Responsive Design: Bootstrap / Tailwind CSS, CSS Grid
- Back-End Development: Node.js
- Database: MySQL
- API Development & Testing: REST APIs, Postman
- Version Control & Collaboration: Git, GitHub
- Authentication & Security: OAuth
- Deployment & Hosting: Vercel / Netlify / Render / GitHub Pages (as applicable)

- Development Tools: VS Code, Chrome DevTools, npm

5.7 System Architecture

The general architecture followed during the internship for a full-stack web application can be summarized in the following layers:

- **Presentation Layer (Front-End):** The user interface built using HTML, CSS, JavaScript, and React.js, responsible for rendering pages and handling user interactions.
- **Application Layer (Back-End):** Server-side logic built with Node.js and exposing API endpoints and handling business logic.
- **Data Layer:** A database (MySQL) used to persist and retrieve application data through the back-end API.
- **Authentication Layer:** Handles user login, registration, and secure access using token-based authentication .
- **Deployment Layer:** The completed application is deployed to a cloud/hosting platform, making it accessible over the internet.

5.8 Methodology

The internship followed a structured, week-wise methodology combining conceptual learning, hands-on labs, weekly assessments, and project submissions, as summarized in the table below.

Week	Module	Description
1	Web Development Basics & Setup	Introduction to the web development lifecycle, basic environment setup (VS Code, Git, GitHub, Node.js), and basics of HTML5 and CSS3.
2	JavaScript & Front-End Basics (React)	Basics of JavaScript and event handling, and building simple, basic user interfaces using React.js.
3	Responsive Design & Back-End Basics	Basics of responsive design using CSS Grid and Bootstrap/Tailwind CSS, and an introduction to back-end development and simple APIs using Node.js.
4	Database, Deployment & Capstone Project	Basics of connecting a database (MySQL), simple authentication (OAuth), deploying a basic web application to a hosting platform, and building a basic capstone project.

Each week concluded with a hands-on assignment or assessment to evaluate conceptual understanding, and selected modules required submission of project documentation. In the final week, a capstone project was submitted, and the overall grade was based on performance across weekly assessments, project submissions, and the final evaluation.

5.9 Expected Outcomes

- Ability to independently design and build responsive front-end interfaces using HTML, CSS, JavaScript
- Practical understanding of back-end development using Node.js
- Hands-on exposure to designing and integrating databases for real-world applications.
- Capability to build and consume APIs with secure authentication.
- Understanding of version control workflows using Git and GitHub.
- Skill to deploy and host full-stack web applications on cloud platforms.
- A completed, end-to-end capstone project demonstrating a full-stack web application.

5.10 Certificates of Completion and Communication Proof

The Internship Completion Certificate issued by Course Joiner for the 4-Weeks Web Development internship is attached earlier in this report (Internship Completion Certificate page and offer letter) and is retained and available as supporting proof, and is included alongside this report in the submission repository.
